Your Shop workspace

Shop separates organization SKU identity from stock held at each store and storage location.

INVENTORY 25,000 active	SCANS 10,000 shared/mo	USERS 10
PHYSICAL STORES 3	LOCATIONS 100 total	REGISTERS Unlimited
ACTIVE EVENTS 10	PLANNED EVENTS 25	HISTORY Unlimited

Choose the working store

Store and register context keep stock-affecting work attributable.

- 1

Store

Choose the physical store in the header.
- 2

Register

Choose a logical register when relevant.
- 3

Operate

Continue into sales, purchases, trades, or adjustments.

Filter inventory by store

One organization SKU can have separate stock balances in several locations.

Search title, SKU, set, player, issue...

SQUARE STOCK SYNC

Catalog, inventory, and Square activity

Publish selected VendorOS SKUs to Square, confirm mappings, and deliberately synchronize physical on-hand counts, and review authoritative Square sales, refunds, and external adjustments.

Square activity

Write history

Automatic Square synchronization

VendorOS owns Shop SKUs, asking prices, and mapped physical inventory counts. Missing catalog items and later VendorOS changes are queued, published idempotently, and verified by reading Square back. Merchant-managed Square items are never overwritten and remain visible as conflicts.

- 1

Map

Confirm Square locations and item variations.
- 2

Review

Inspect dry runs, orders, writes, and conflicts.
- 3

Reconcile

Resolve drift instead of blindly overwriting changes.

Read store reporting

Compare inventory, sales, profit, purchases, trades, and transfers by location.

\$295.04

Cost paid or assigned

\$385.00

Current asking or market value

\$680.04

Inventory received

13 units / 13 valued

This is unrealized inventory value, not event profit. It compares recorded acquisition cost with the current asking price, falling back to verified market or intake values when needed.

Unvalued units are excluded from the potential gain.

Performance by shop

Inventory, sales, purchasing, and trade activity by physical location.

Follow alerts into the integrity or reconciliation tools.

Vendor OS | Shop Tier Guide

9

Shop owner checklist

Keep inventory authority and external synchronization controlled.

DAILY

Confirm working store, investigate reconciliation items, and review provider health.

RECEIVING

Use transfers and receiving instead of two manual stock adjustments.

SQUARE

Vendor OS owns managed SKU identity; unexplained external changes remain reviewable.

PRODUCTION

Complete live credentials, webhooks, backups, monitoring, and payment tests before launch.
